

Living on the Edge: Management Benefits and Techniques for Streambank

Start Date: 9/15/2017 9:00 AM

End Date: 9/15/2017 4:00 PM

The WakeNature Preserves Partnership will host a **FREE** workshop focused on management opportunities, challenges, priorities, and approaches for riparian habitats. The morning session includes invited speakers for many topics, including:

- Beaver ecology and management,
- Trail access considerations,
- Designing interpretive signage,
- Invasive species management,
- Identifying restoration opportunities and approaches,
- Partnership possibilities.

After lunch (on your own), participants will head into the field to see a completed stream and wetland restoration project on a tributary of Lake Raleigh. We will learn about wood duck and prothonotary warbler enhancements, and explore areas in Lake Raleigh Woods where a management planning effort is currently underway.

Please join us for a day of information sharing and networking. Participants will better understand the opportunities and challenges associated with supporting healthy habitats and their associated species in critical riparian areas.

Location:

NC Wildlife Resources Commission

1751 Varsity Drive, Raleigh

Please come to the Bullfrog Room on the Ground Floor.

The mission of the WakeNature Preserves Partnership is to organize and provide resources to identify ecologically valuable, publicly owned open spaces within Wake County, NC, and to build capacity for appropriate management and long-term stewardship of those areas.
