

Boater's Basic Weather & Forecasting Seminar - May 18th & 19nd, 2021

Start Date: 5/18/2021 6:00 PM

End Date: 5/19/2021 9:00 PM

Basic Weather and Forecasting Course Description

Event Summary

Learn how weather systems affect boaters. Click 'Read More' for additional information.

Event Description

Are the winds too strong? What is a small craft advisory? The safety and comfort of those who venture out on the water have always been weather-dependent. This seminar, a must for boaters who have never taken a weather course, will help you answer these questions and gain an understanding of the forces acting on your boat. Understand the forecast and know what to expect, whether you're in a kayak, trawler, sailboat, or schooner. This seminar presents a complex subject in a way that is both understandable and useful.

Each seminar participant may purchase a waterproof McGraw Hill Captain's QuickGuide – Onboard Weather Forecasting – designed for onboard and field use, along with a Student Guide with slide images and complete notes written especially for the seminar.

Basic Weather and Forecasting course will be taught on May 18th and 19th at 6:00pm, each evening. The course is being taught by the Fayetteville Sail & Power Squadron, a local organization dedicated to boating safety through educational programs, as part of the United States Power Squadrons.

What's Included?

- What causes weather
- How weather systems move
- Why winds blow
- What clouds tell us
- How storms and fronts create foul weather
- Why fog forms
- Where to get the best professional forecasts
- How to refine them using your own observations
